# BMW Emblem - Python Turtle Art

## Project Overview

This is my COMP 115 Project 1. I used Python Turtle to draw a simple BMW-inspired emblem. The drawing has a black outer ring and four blue and white sections in the center. The letters and extra decorative circles have been removed so the picture focuses on the emblem shape.

## Files

- bmw_emblem.py - The Python source code.
- README.md - Information about the project and how to run it.
- README.pdf - A PDF version of this project description.
- bmw_emblem.png - A preview image of the drawing.

## How to Run

1. Make sure Python 3 is installed.
2. Open bmw_emblem.py in VS Code.
3. Run the file.
4. A Turtle window will open and display the emblem.

You can also run it from a terminal:

```
python bmw_emblem.py
```

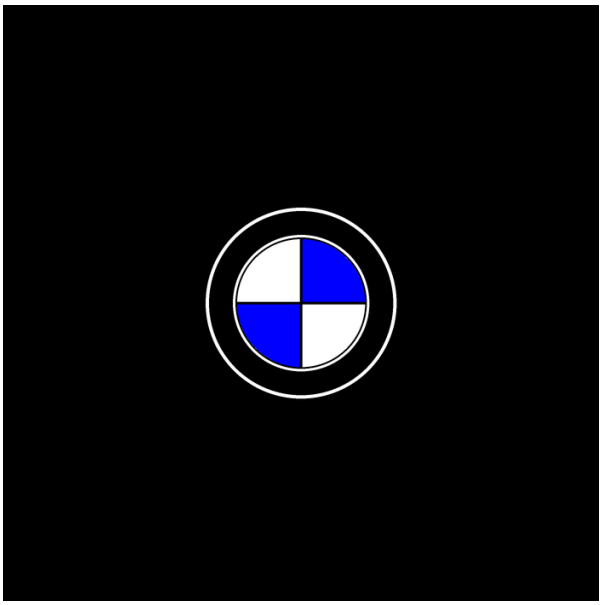
## Functions Used

- draw_circle() draws a filled circle.
- draw_sector() draws one quarter of the inner circle.
- draw_line() draws a straight line.

## Python Concepts Practiced

- Functions (def) to organize the code and avoid repeating instructions.
- A for loop with range() to draw the four sections.
- An if/else condition to choose blue or white for each section.
- Turtle commands such as goto(), forward(), circle(), and setheading().

## Drawing Preview



## Note

This is a student drawing inspired by the BMW emblem. It is an independent class project and is not affiliated with BMW.
